**LO2: Understand the skills needed to pursue a career in the creative media industry**

Evaluate a range of practices and apply these practices to support own development

For this learning outcome you are required to look specifically at the software, hardware and techniques you will need to develop in order to progress in your specialism.

Once you have researched these techniques, you need to experiment with them in order to develop your skillset. Produce 5 – 10 examples of the techniques you have researched.

**You will need to provide:**

- Analysed videos of different techniques being used.
- Analysis of software / hardware required to be successful in your specialism
- Evidence of experimentation of these techniques
